EDUCATION

University of Wisconsin - Madison

August 2021 - May 2025

Bachelor of Science, Computer Science

Relevant Courses: Software Engineering, Algorithms, Artificial Intelligence, Discrete Math, Linear Algebra, Cryptography, Networks, Operating Systems

Coursera | IBM Full Stack Software Developer Certificate

Gained hands-on experience building cloud-native web applications using React, Node.js, Python (Flask/Django), Docker, and Kubernetes, with emphasis on microservices, CI/CD, and GitHub-based DevOps workflows.

EXPERIENCE

Mechdyne | Marshalltown, IA | *Software Engineer*

May 2025 - Present

- Architected and scripted immersive 3D application logic in **Unity** utilizing **C#**, integrating the **getReal3D** SDK to handle real-time **spatial** tracking and interactive environmental systems.
- Developed and maintained automated workflows for game-engine **asset ingestion pipelines**, reducing manual environment configuration time through reusable **C#** scripts.
- Developed **PowerShell automation scripts** to configure **NVIDIA** Mosaic layouts, resynchronize multi-display setups, reset GPU/display states, and streamline recurring display-management workflows for immersive environments.
- Collaborated on **technical design specifications** and software planning, evaluating feature trade-offs, code modularity, and long-term maintainability for client deliverables.

Neubode | Madison, WI | *Full Stack Founding Engineer*

March 2024 - Present

- Built a roommate matching platform with **React** and **TypeScript**, enabling students to find compatible people and housing.
- Implemented **secure authentication** with Google SSO and student email verification, ensuring 100% verified student access.
- Engineered and scaled **RESTful APIs** with serverless functions (**Supabase Edge**, **Firebase**), applying secure request validation, **CORS** configuration, and rate-limiting; delivered 92% uptime and resilient traffic handling.
- Optimized front-end performance with **React**, reducing initial load time by 30% and decreasing form-submission errors by 40%.
- Automated deployments with **GitHub Actions**, improving release reliability and cutting cycle time by 25%.

CareTech | Remote | *Software Engineer Intern*

June 2023 - August 2023

- Engineered a scalable **AWS-based data pipeline** leveraging **S3**, **Lambda**, and **EC2** to capture interactions between patient data, pollen exposure, and weather patterns—automating ingestion and reducing data processing time by 40%.
- Deployed and fine-tuned a **TensorFlow** prediction model using **Amazon SageMaker**, improving model retraining speed and adaptation to new data by 30%.
- Conducted exploratory data analysis (EDA) with **Pandas**, **NumPy**, and **Matplotlib** on datasets stored in **S3**, refining predictive accuracy by 2× through feature optimization.
- Streamlined **CI/CD** workflows with **Docker** and **GitHub Actions**, enhancing deployment reliability and collaboration.

PROJECTS

Sustainik - Sustainable E-commerce platform

- Developed a marketplace with **Java Spring Boot** and **PostgreSQL** for a platform featuring locally sourced, sustainable goods.
- Implemented layered architecture with **controllers**, **services**, and **repositories**, exposing **RESTful APIs** for user checkout flows, vendor catalog management, and order tracking.
- Delivered admin dashboards to edit catalog with **server-side validation** to ensure data integrity and consistent stock levels.
- Optimized backend performance using **pagination** and **query optimization**, reducing catalog response times by 40%.
- Configured **Spring Boot Actuator** for health checks and metrics, enabling real-time monitoring of API performance.

SKILLS

Languages: Java, Python, TypeScript, JavaScript, C#, HTML, CSS, SQL

Frameworks & Libraries: Spring Boot, React, Node.js, Tensorflow, PyTorch, REST API, GraphQL

Databases: MySQL, Firestore, PostgreSQL, MongoDB, NoSQL

DevOps: Docker, Kubernetes, Git, GitHub, GitLab, Jira

Cloud Platforms: Amazon Web Services (AWS), IBM Cloud
